

AEROSEAL[®]

Certified Duct Diagnostics & Sealing
Multi-award winning patented process

Increase Comfort - Save Money - Live Healthier

Your Ducts shouldn't cost you Money, but they do!

In houses with forced air heating and cooling systems, ducts are used to distribute conditioned air throughout the home. In a typical house however, about 20-30% of the air that moves through the duct system is lost due to leaks, holes and poorly connected ducts. The result is higher utility bills and difficulty keeping the house comfortable, no matter how the thermostat is set.

Aeroseal is a Multi-award winning, Patented, computer controlled process that seals ducting from the inside out. **Aeroseal** is more effective than any other method of duct sealing – it can reach all leaks – even those hidden behind walls and under insulation (90% of ductwork).

Leaky Ducts are usually the root cause of three problems:

1. Uneven heating (room to room)
2. High energy bills
3. Poor indoor air quality (dust/allergies)

Comfort is more than a number on the thermostat.

The fact is, something that most of us never even think about could be costing us a lot more money than we realize. Whether a home is old or new, leaking ducts cost homeowners money, not to mention the stress it causes an HVAC system.

Consider this:

- About 50% of the average home's utility bill is spent on heating and air conditioning.
- On average, 30 cents of every \$1 spent on heating and cooling a home disappears into thin air due to leaky ducts.

Create a Safer, Healthier Home

- Leaks pull mold, dust and other pollutants into your home causing indoor air quality issues and have the potential to create harmful allergy problems.
- Leaks contribute to safety issues related to backdraft of appliance fumes, auto exhaust and radon gases being released into your home.

Frequently Asked Questions

Q: I have a high efficiency furnace. Why would I need duct sealing.

A: The efficiency of the furnace is minimized if it has to work longer/harder to get the conditioned air to the desired location due to duct leaks.

Q: Is there an odor?

A: At the time of application there is a very mild odor, similar to that of craft glue. However, that dissipates within a few hours.

Q: Are VOCs (Volatile Organic Compounds) emitted?

A: The sealant has been tested by an independent lab and has been found to have very low VOCs.

Q: Do ducts need to be cleaned before Aerosealing?

A: Most ducts do not need to be cleaned before sealing. The Technician will assess the condition of the ducts first and make a recommendation.

Q: Can ducts be cleaned after Aerosealing?

A: Ducts of all types can be cleaned after Aerosealing.

Q: Will the ductwork be coated with sealant after Aerosealing?

A: No. The Aeroseal process does not coat the ducts.

Q: How long will it last?

A: Our Certificate of Completion is your guarantee the job was done right and the measurable results allow us to provide a 10 year Guarantee!
